Children born with EB lack anchors that hold the layers of their skin together. As a consequence, any activity that rubs or causes pressure produces painful sores/blisters like a second-degree burn all over their body. This leads to severe disfigurement and sometimes early death. Parents have coped by protecting the child's skin with expensive prescription gauze and ointments to prevent and protect the wounds and healthy skin-something that health insurers refuse to pay for and can cost a family up to several thousand dollars a month

"Most importantly...please pray"

Entry fee \$15 person (kids 12 & under free)

Order T-shirt before 08/15/2009 (\$15/shirt), circle size/quantity: XXL___, XL___, L___

Checks made payable to:

M.U. Foundation
